ISOGEI

“Non-surgical face and body lifting”

What does it do?

Whether it is the face or body we all have parts that start to sag.

The simple fact is that with age our muscles weaken and lengthen.

Surgery is one solution, but it can be expensive, painful and irreversible if an error is made. It relies on tightening the skin to stretch you into place, but does little to restore the muscular fabric that build beautiful faces and bodies.

Now there is Isogeï. Isogeï is a remarkable treatments that tells the muscles to exercise in a certain way to increase their strength to return to their natural shorter length. The result is firmer and tighter skin and muscles.

How does it work?

Isogeï uses small electrical paddles to produce a controlled electric shock. This shock causes isometric exercise to take place in the muscles.

This exercise strengthens the muscle and tightens them - pulling the skin back into place and reduce the visibility of sagging areas.

The advantage of Isogeï over other similar treatments is the accuracy that can be obtained ensuring the targeted muscles are reached and the results required are obtained.

What benefit will I see?

- **Strengthened Muscles**
- **Toned Muscles**
- **Improved shape**
- **A more youthful look**

Isogeï is essential for the face and body that is out of shape and invaluable for the lucky ones who just want to stay in shape. The beauty of Isogeï is that you can see and feel its benefits after the first short treatment.

The photo above shows the difference that was achieved after only 10 minutes on the muscles over the eye to curve the arch the way the client wanted. The improvement in shape and firmness is remarkable and achieved without pain or risky implants.

Of course the results vary according to your build but your first treatment will prove just how much Isogeï will do for you.
